Hands-On Technical Workshops

by Ron Beaufort

Onsite Classes

Conducting our training classes "onsite" at your plant

All of our lab equipment is designed to be portable - so onsite classes are available. Please allow for adequate lead time when considering the class schedule since conducting one week of onsite training requires that we reserve a three-week block of time from our local training calendar. This is necessary for transportation to and from your site - and to allow sufficient time for setting up and taking down our extensive hands-on lab equipment.

Just contact us to discuss the logistics involved and to request a free no-obligation price quote for the extra expenses required.
